

## 100 Detailed Features for a Hospital Management System (With Real Examples)

1. Online Patient Registration with OTP/Email – Patients sign up using phone/email and verify identity. Example: Apollo Online Consult app uses phone OTP verification.
2. Complete Medical Profile – Patients add allergies, chronic diseases, surgeries. Example: Practo stores full medical history visible to doctors.
3. Family Profiles – Single account managing kids/parents profiles. Example: Practo allows multiple family members.
4. Unique MRN – Automated Medical Record Number used in billing and prescriptions.
5. Document Upload – Patients upload insurance card, Aadhaar. Example: StarHealth online portal allows policy upload.
6. Emergency Contacts – Store contacts used by hospital in emergencies.
7. Language Preferences – Patient selects language for notifications (English/Hindi).
8. Patient Dashboard – Shows upcoming visits, lab reports, prescriptions (like Tata 1mg dashboard).
9. Doctor Registration – Doctors sign up with degree/license docs for verification.
10. Verified Doctor Profiles – Admin checks registration number (like MCI number).
11. Doctor Scheduling – Doctor sets available weekdays, slots. Example: Practo schedule management.
12. Multi-Clinic Practice Support – Doctor can practice in two branches.
13. Fee Management – Separate charges for online vs physical consult.
14. Doctor Dashboard – Today's appointments, pending reports.
15. Online/Offline Status – Shows if doctor is accepting new consults.
16. Slot-based Appointment System – Patient selects available time. Example: Practo Instant Booking.
17. Instant Queue Consultation – "Consult Now" puts patient in live queue.
18. Time Zone Auto-Detection – Useful when doctor abroad and patient local.
19. Appointment Reschedule – Patient can change slot within rules.
20. Waitlist Handling – If full day, patient gets notified on slot opening.
21. Appointment Status – Booked, Waiting, In Consult, Completed, No-show.
22. SMS/Email Reminders – Auto reminders 1 day and 1 hour before.
23. Recurring Visits – Used for psychiatry, physiotherapy weekly visits.
24. Video Consultation – Secure WebRTC-based call (like Practo video room).

25. Audio-only Mode – Auto fallback during low network.
26. Virtual Waiting Room – Patients wait until doctor joins.
27. Consultation Chat – Text chat inside video room.
28. File Sharing – Upload reports during consultation.
29. Doctor Note Tool – SOAP notes panel.
30. Screen Sharing – Doctor shows medical PDFs, X-rays.
31. Consultation Recording – Stored only after consent.
32. Auto Timer – Shows session duration for doctor.
33. System Pre-check – Tests mic/camera before join.
34. Visit Records – Each appointment creates clinical “encounter”.
35. Problem List – Track long-term conditions (diabetes, asthma).
36. Medication History – Complete list of past medicines.
37. Allergy Alert – Red flag shown on doctor screen.
38. Vitals Chart – BP, Sugar trends shown as charts.
39. Document Attachments – X-ray, MRI or discharge notes upload.
40. Predefined Templates – Fever Template, Chest Pain Template.
41. Visit Summary PDF – Auto-created summary for patient.
42. E-Prescriptions – Doctor selects medicine, dose, frequency.
43. Drug Database – Generic + brand names (e.g., Paracetamol 650mg).
44. Drug-Allergy Warning – Alerts if patient allergic (e.g., Penicillin).
45. Quick Instruction Buttons – “Before food”, “After food”.
46. Refill Requests – Patient can repeat last prescription.
47. Pharmacy Routing – Prescription sent to hospital pharmacy.
48. Prescription Sharing – PDF downloaded or sent via WhatsApp-like link.
49. Dose Validation – Alerts if dose exceeds safe limits.
50. Lab Ordering – Doctor orders blood test during consult.
51. Lab Test Catalog – List of 500+ tests (CBC, Thyroid).
52. Sample Status – Ordered → Collected → In Process → Completed.
53. Lab Result Entry – Technician manually enters values.

54. Auto Flagging Abnormal Values – High/Low flagged in red.
55. Lab Doctor Approval – Pathologist signs-off critical reports.
56. Result Notifications – Patient notified instantly.
57. Trend Graphs – HbA1c over last 2 years shown.
58. Consultation Billing – Auto bill generated for visit.
59. Online Payment Gateway – Razorpay/Stripe integration.
60. Multiple Payment Types – UPI/Cash/Card.
61. Health Packages – Diabetes Package: 3 consults + 2 labs.
62. Insurance Support – Add policy, TPA, pre-authorization.
63. PDF Receipts – GST invoices auto-generated.
64. Refund Workflow – Admin approves partial/full refunds.
65. Outstanding Balance – Warns patient before next booking.
66. RBAC – Roles: Admin/Doctor/Nurse/Lab/Pharmacy.
67. Multi-Branch Support – Branch A, B, C separate data.
68. Activity Log – Every edit/view logged.
69. Dashboards per Role – Doctors see cases; Admin sees revenue.
70. Global Hospital Settings – Name/logo/tax settings.
71. Holiday Calendar – Blocks booking automatically.
72. Templates for SMS/Email – Customizable.
73. Server Logs Panel – Shows system errors.
74. Nurse Notes – Nurses track vitals, injections.
75. Bed Management – Assign rooms to admitted patients.
76. Care Plans – Post-surgery care protocols.
77. Vital Monitoring – Auto reminders for every 4-hour vitals.
78. Doctor Productivity Report – Number of patients seen/day.
79. No-show Report – Analytics for missed appointments.
80. Revenue by Department – Cardiology, Ortho, Neuro.
81. Patient Retention – Returning vs New patients.

82. Disease Trend – Monthly counts of fever, dengue, etc.
83. Daily Cashbook – Payment summary.
84. Report Export – CSV/Excel option.
85. Secure Messaging – Follow-up chat for 3 days after consult.
86. Health Campaigns – Broadcast “Free BP Checkup Camp”.
87. Rating System – 5-star doctor reviews.
88. Health Reminders – Annual eye exam reminders.
89. Multi-language UI – English, Hindi, Tamil.
90. JWT Authentication – Secure token-based login.
91. Row Access – Doctor only sees his patients.
92. Export Log – Download history tracked.
93. Encrypted Storage – AES-encrypted ID documents.
94. Data Retention – Auto delete old recordings after X months.
95. Active Device List – User sees logged-in devices.
96. SMS API Integration – MSG91/Twilio.
97. Email Integration – SMTP or SendGrid.
98. Calendar Sync – Google Calendar sync for doctors.
99. Public API – Used by mobile apps.
100. FHIR-ready Models – Mapping to HL7/FHIR Patient/Encounter resources.
